

From legacy pain to steady gain.

#BusinessMadePersonal

Stability can be your biggest risk.

SAP modernization often feels like something that can wait – especially when systems appear stable, and the business continues to run ‘as normal’.

But in reality, standing still with SAP rarely reduces risk – it allows it to build:

- **Complexity continues to grow** – as custom code, integrations, and processes evolve without full visibility.
- **Manual effort quietly increases** – with workarounds and exceptions becoming embedded in daily operations.
- **Knowledge concentrates in fewer hands** – creating dependency and increasing operational fragility

Over time, what feels stable becomes harder – and more expensive – to change.. That isn't control. **That's exposure.**

REALITY CHECK #1

55% of organizations

are concerned about the duration of a modernization project, which directly impacts ROI timelines.

REALITY CHECK #2

54% of organizations

state that complexity of their system landscape is a key challenge for their SAP investment decisions.

Turning complexity into progress.

As experience teaches, progress in SAP modernization begins with a clear view of what needs to be done, where it will have the greatest impact, and in what order – transforming complexity into confident, structured progress. **That means shifting:**

From starting with a predefined program.

To understanding how SAP actually supports your business today.

From committing to large-scale change upfront.

To shaping a path that reflects your priorities, pressures, and pace.

From relying on future-state promises.

To delivering meaningful progress your teams can see, feel, and stand behind.

Together, this approach ensures progress is shaped – not imposed – around the expected value that SAP systems should bring to day-to-day operations.

Progress made personal.

Every SAP landscape reflects the business it supports. Which is why progress only works when it's shaped around your reality – not a predefined program.

HCLTech begins by uncovering your SAP footprint, combining deep industry and process expertise with over a decade of AI leadership – alongside capabilities that include **Migration Factory**, accelerators (such as HCLTech iCore industry solutions), and **AI-infused tooling** for assessing data, custom code, integrations, and dependencies with precision.

The result is a commitment we make to deliver:

Understanding before action: where assumption is replaced with insight – using AI and design thinking to analyze your SAP landscape and define what really needs to change.

A roadmap shaped for your business:

with a modernization path aligned to your priorities, pace, and appetite for change – across greenfield, brownfield, or hybrid approaches.

Industrialized, predictable delivery:

made possible by HCLTech's Migration Factory that's designed to reduce cost and bring structure to complex transformations.

Structured, insight-led S/4HANA Assessment Service:

using unique frameworks and tools to clarify value, reduce uncertainty, and define a clear transformation path.

The outcome.

- Greater clarity and control across your SAP landscape.
- Reduced risk and disruption.
- Faster readiness and improved predictability.
- Early, measurable business value.
- A modernization journey aligned to how your business actually runs.

Because progress works best when it's personal. Not forced. Not templated. But built around real business expectations.
